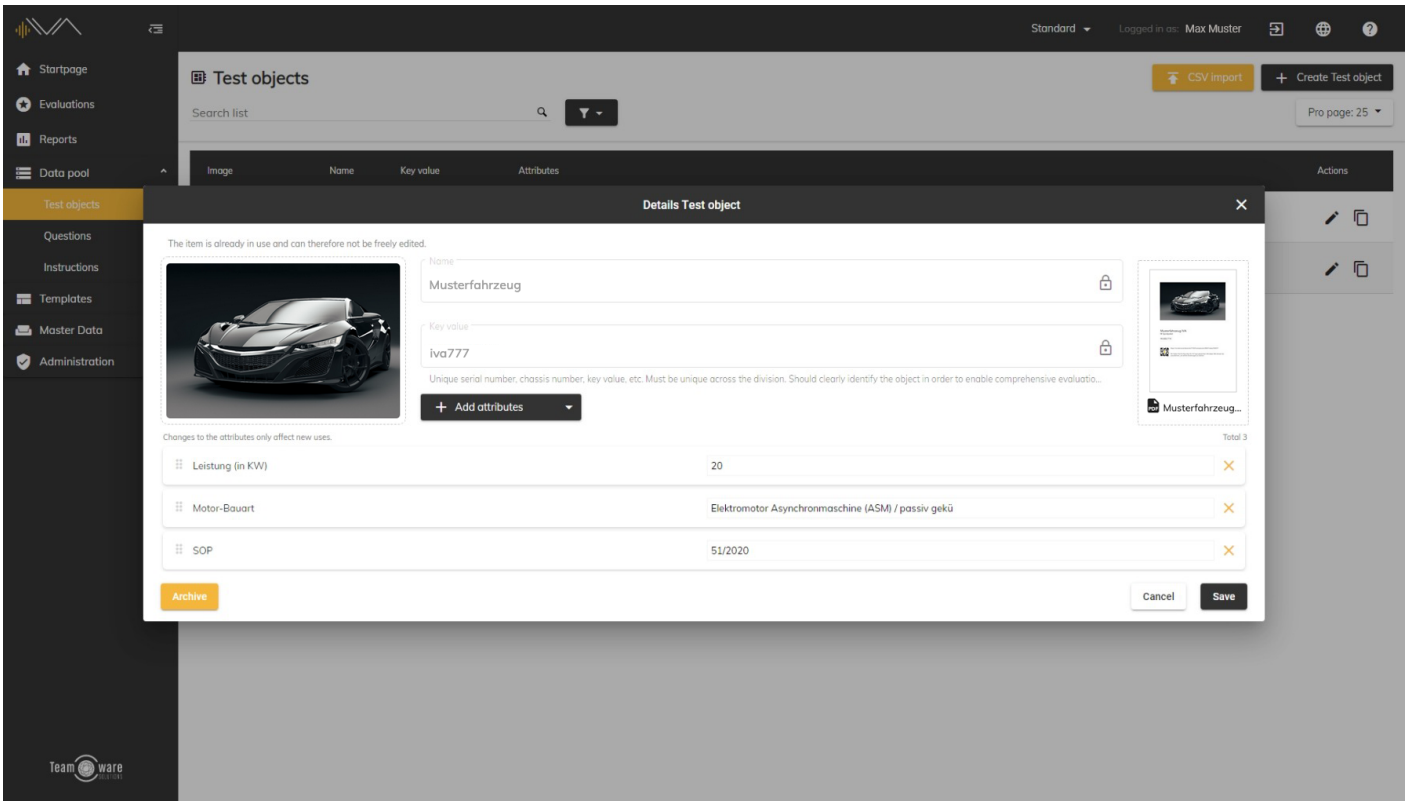
How do I delete an existing test object?



In IVA, test objects can only be deleted as long as they are not used in any tests, otherwise test objects can only be archived.

First, navigate to the menu item Data pool > Test objects. You will now see an overview of all test objects in the selected division. Double-click on the test object you want to delete or click on the pencil. A pop-up dialog appears with the details of the selected test object.

To delete or archive the test object, click on the "Delete" or "Archive" button at the bottom left of the dialog window. If you have deleted the test object, the button text now changes to "Confirm deletion!" - Click the button again to finally delete the test object. If you have archived the test object, the button text now changes to "Restore".
