4.1. Test objects

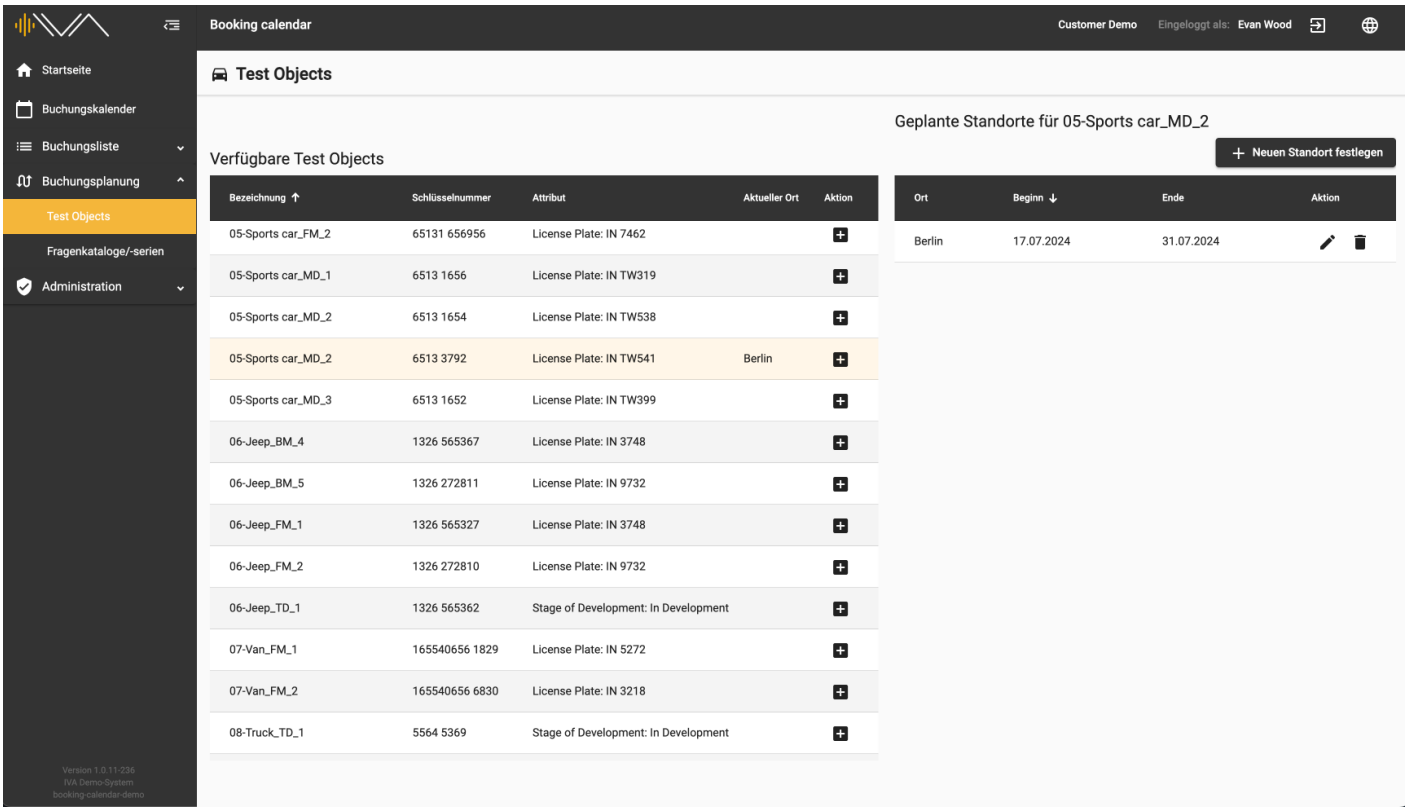

Under the menu item “Test objects” you will find two tables. On the left is a table with “Available test objects”.

If you click on a row with a test object, the tile is colored light yellow and you can perform an action by clicking on the “+” icon or by clicking on the “+ Set new location” button at the top right. A new window then appears in which you can assign the “Location” and the “Start” and “End date” to the corresponding vehicle.

A new row then appears with the location, start and end dates, which you can edit or delete.

This allows you to assign “Planned locations” to each vehicle individually. These locations are automatically assigned in the booking calendar when creating a booking.
