

1.0 Additional fields as mandatory fields

In the Control Center, it is now possible to make the additional fields mandatory.

This function is reflected in the iOS application. Via the “+” button and in feedback via the “Add new feedback” button, the old options are available as usual and additional fields (attributes) that can be used as mandatory fields have been added.

In the IVA iOS app, the mandatory fields are marked with a red asterisk (*) and must be answered in order for the feedback to be saved. Without filling in the mandatory field, the feedback cannot be completed. The “Save” button is not active at first. The feedback can only be saved once all mandatory fields have been completed.
