Version 2.5-2024

The update to this version is carried out automatically. This release includes some optimizations and new functionalities, e.g: Visibility of subcategories and the introduction of a central access point to the IVA Control Center. Some BUGs have been fixed for optimal stability.

- 1.0 Visibility of subcategories in the feedback validation
- 2.0 Central access point for all IVA users
- 3.0 Improvement
- 4.0 BUGs

1.0 Visibility of subcategories in the feedback validation

The visibility of subcategories has been improved to facilitate efficient recording.

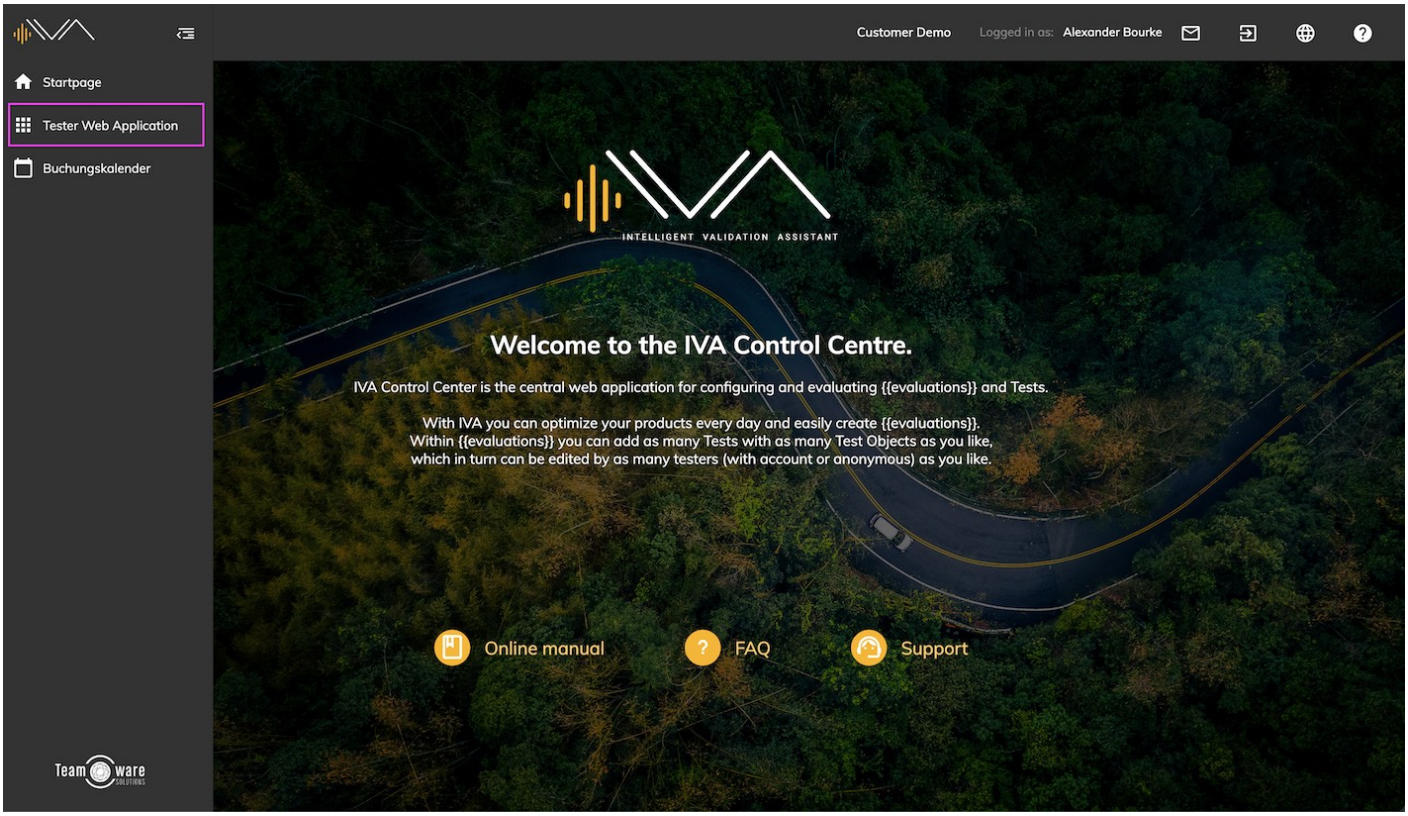

As of recently, in the table under Evaluation > Feedback Validation in the "Categories" column, you can now also see the first 3 subcategories in addition to the respective category name. If there are four or more subcategories, only the last one is displayed.

This has also been changed under the menu item Evaluation > Analysis.

2.0 Central access point for all IVA users

IVA now has a central access point for all users.

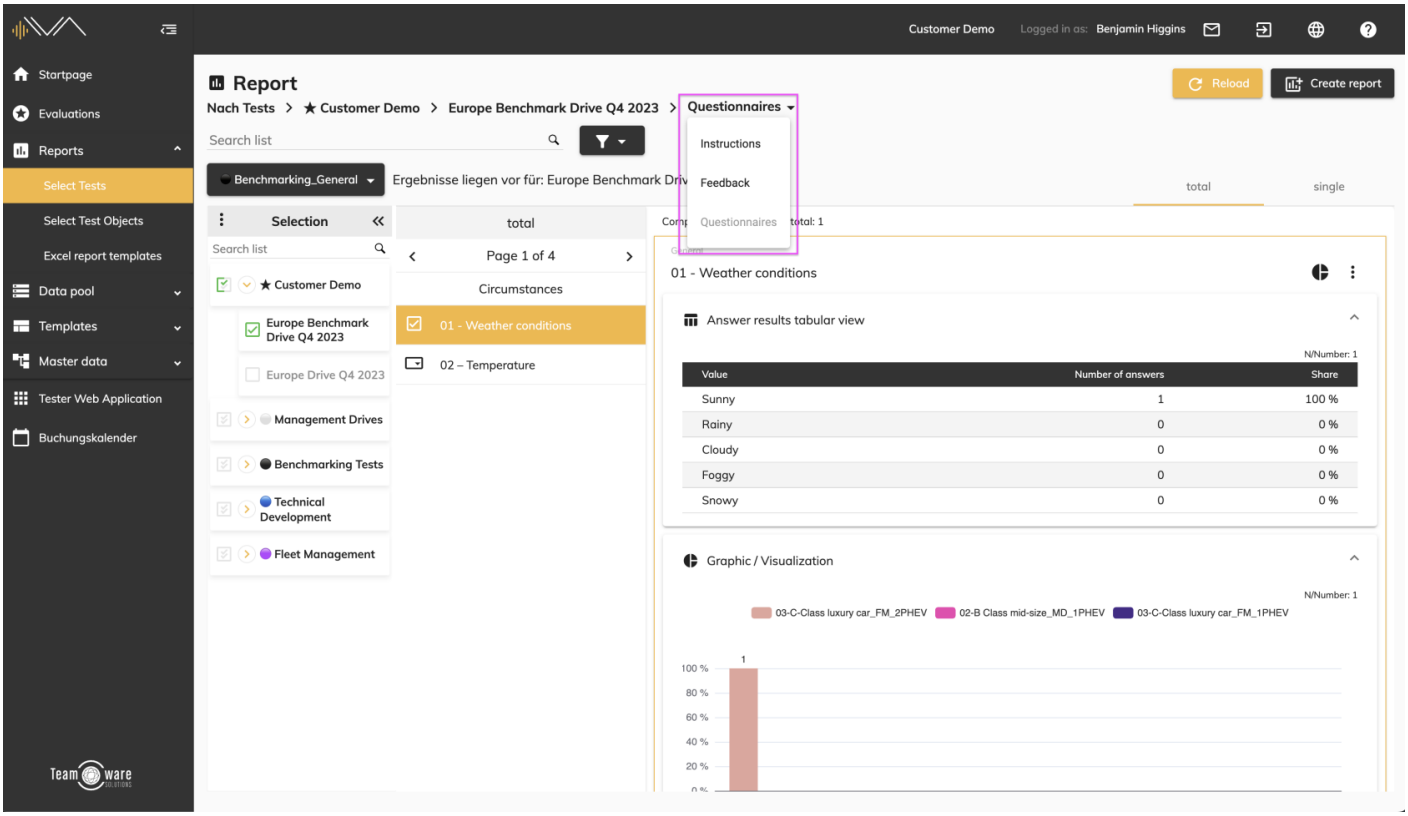

Via the URL:

IVA Control Center

testers now too can log in and access the IVA Control Center. By clicking on the page navigation and the menu item "Tester web application", a new tab opens and leads to IVA Test (= Web Tester).

3.0 Improvement

Optimization of the breadcrumb navigation for result types

The breadcrumb navigation has been optimized to enable direct access to the various result types.

You can navigate to the following result types via the drpdown in the breadcrumb navigation:

- Instructions
- Feedback and
- Question catalogs

The step to return to the evaluation overview is no longer necessary, this saves you a click.

Improvements to PDF reports

PDF reports of feedback results possible for multiple tests at the same time

It is now possible to create a PDF report for several tests and evaluations at the same time in the Evaluation > Feedback Validation. This makes it easier to evaluate different tests and evaluations

according to test objects or categories.

In addition, a cover sheet has been developed in which the tests and evaluations are automatically generated and displayed.

Sorting within PDF reports

The layout of the PDF reports has been improved to make them easier to analyze. You can now sort by test object and category.

4.0 BUGs

Saving is possible again after creating a question in a questionnaire

After creating a question in an existing questionnaire, the "Save" button becomes active again and the action is available.
