1.0 Additional fields for testers as mandatory fields

It is now possible to mark the additional fields as mandatory fields. When creating or editing a test, you can set two additional toggles in the feedback under "Additional fields for testers":

- Mandatory field, for the tester UI and the iOS app
- Siri query, only for the iOS app

The mandatory field must be answered so that the feedback can be saved. The feedback cannot be completed without filling in the mandatory field first.

If the toggle for “Siri capture” is switched on, Siri explicitly asks the tester about the selected field in the feedback.

In the Web Tester it looks like this: Link to the manual

In the iOS app it looks like this: Link to the manual
