10.0 Improvement

Optimization of breadcrumb navigation

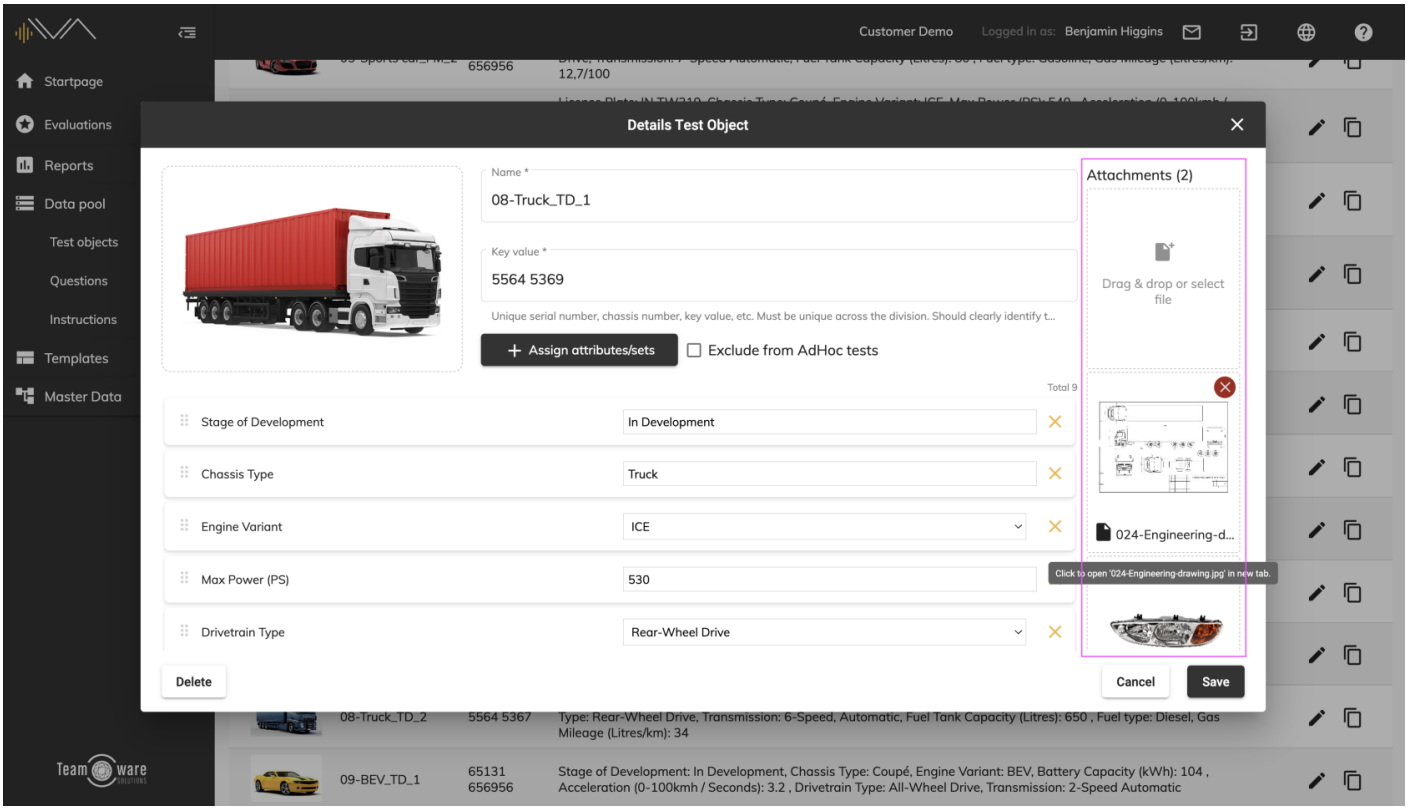

The breadrumb navigation in IVA Reports has been optimized. From now on, the menu item with icon is in the first line and the breadcrumb navigation follows in the second line: submenu:

Select Tests > evaluations name > test name > result type

Each part of the breadcrumb navigation is clickable.

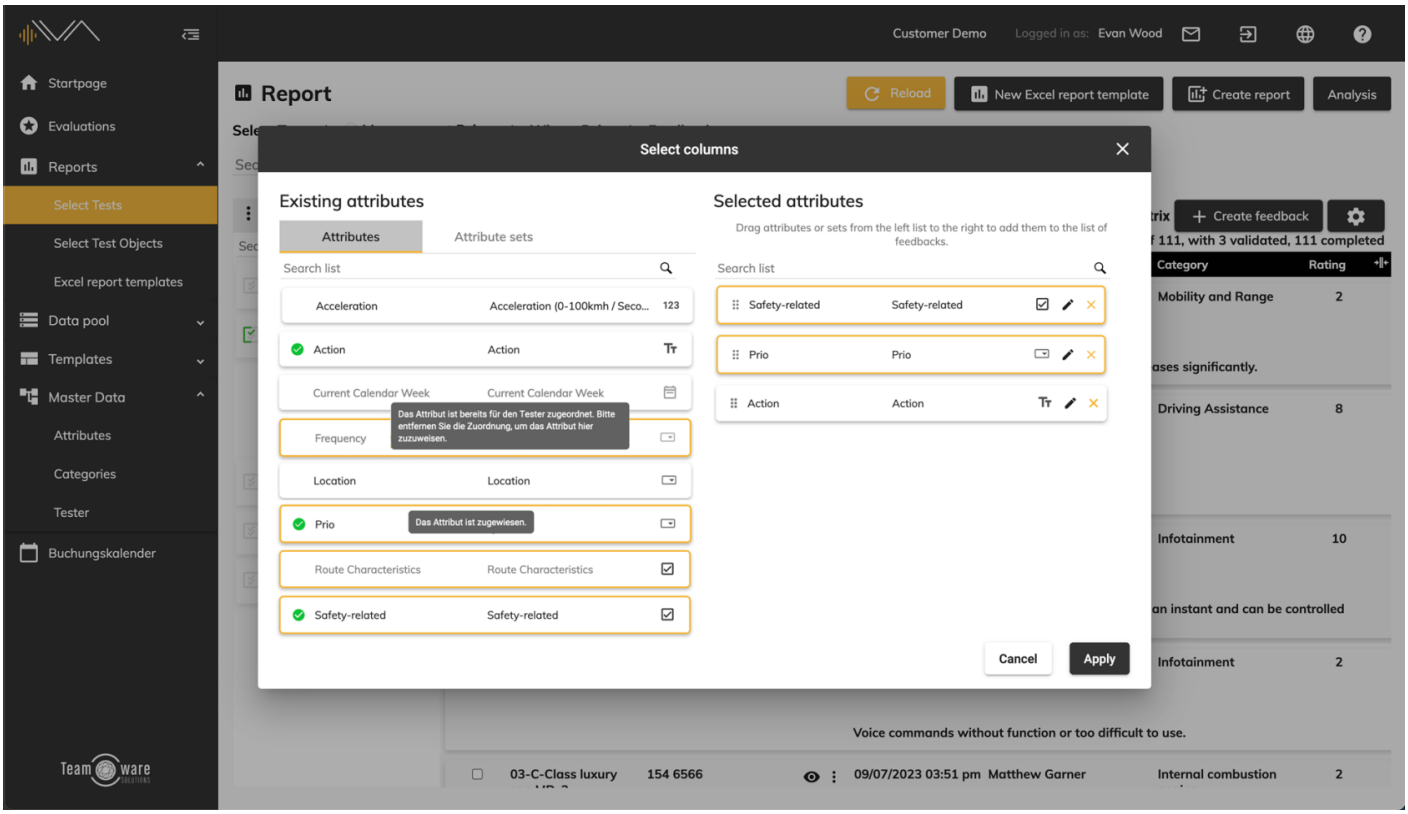

The test objects and other sorting options can be selected in the filter.

Import multiple files to test object

The uploading of files in the data pool under “Test objects” has also been optimized.
When creating and editing a test object, you can now upload and save several files one after the other via drag & drop or with one click under “Attachments” on the right.
The files can be opened enlarged in a new tab with a click or deleted with the red “x” icon.

Improved behavior of additional columns (planner and tester attributs)

To make it easier to distinguish the overview of attributes used in the additional columns, a new label with six states has been introduced in the left-hand column:

	not assigned	assigned and without value	assigned and with value
tester attribut	no change	no change	boarder with accent color
planner attribut	no change	green check icon	green check icon and boarder with accent color

Below the evaluation and feedback validation, there is a button with a “cogwheel” icon that leads to a “Select columns” dialog. Additional attributes can be configured here and added, deleted or edited as required. These attributes are then displayed in the additional columns.

A detailed descripton can be found here: LINK to the manual
