3.0 Select to tests objects

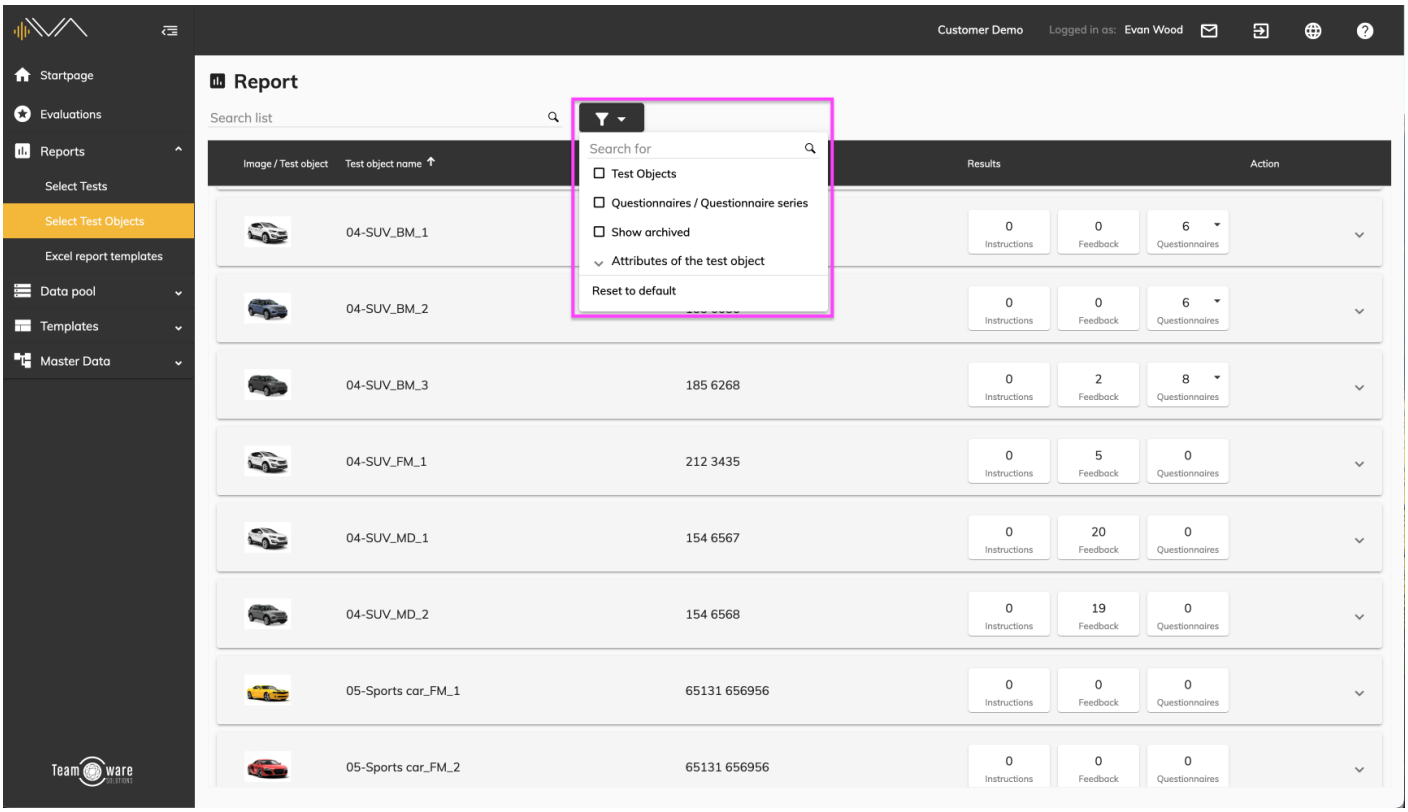

An alternative overview of the evaluation was recently implemented, which allows all results to be sorted according to the existing test objects. The new view can be accessed via the navigation bar on the left under the menu item “Evaluation” -> “Select Test Objects”.

Via the respective result tile of a test object, you can access the reports

- instructions
- feedback
- questionnaires

that are assigned to the test object.

By expanding the test object tile, all tests to which the test object is assigned are listed. Clicking on a result tile within these tests takes you to the reports of the results for this specific test object in this specific test.

A detailed descripton can be found here: LINK to the manual
