5.0 Matching mechanism for data import to the test objects

The process of assigning several files to a test object simultaneously and quickly has been simplified. A mechanism has been developed to automatically assign the files to the correct test object based on the key number.

The import and assignment of the following file formats:

- pdf
- png
- jpg

to a test object in a test is possible using the automatic process, which is carried out by clicking on the “Automatic assignment” button. This assignment of files can also be carried out manually using the drag & drop function.

A detailed descripton can be found here: LINK to the manual

In addition, a file can be added to each individual test object in the data pool.

Import multiple files to test object
