

How can I edit an attribute?

To do this, please click on Master data in the navigation on the left side and then on Attributes. You will now see an overview of all attributes and can also search for attributes. If you have selected an attribute, you can access the editing window by double-clicking on the corresponding line or alternatively by clicking on the pencil icon.

Here you can now change the name (note: this must be unique!), the description, the attribute type and the setting as to whether the attribute should be hidden in the web tester and the app. The Name and Description fields can be freely changed without hesitation as long as the attribute is not yet used in any evaluations or tests. As soon as the attribute is used in one or more evaluations and tests, these fields are locked. However, by clicking on the lock symbol, the respective field can be unlocked and edited again if required.

Don't forget to click "Save" when you're done editing.
