Attribute sets

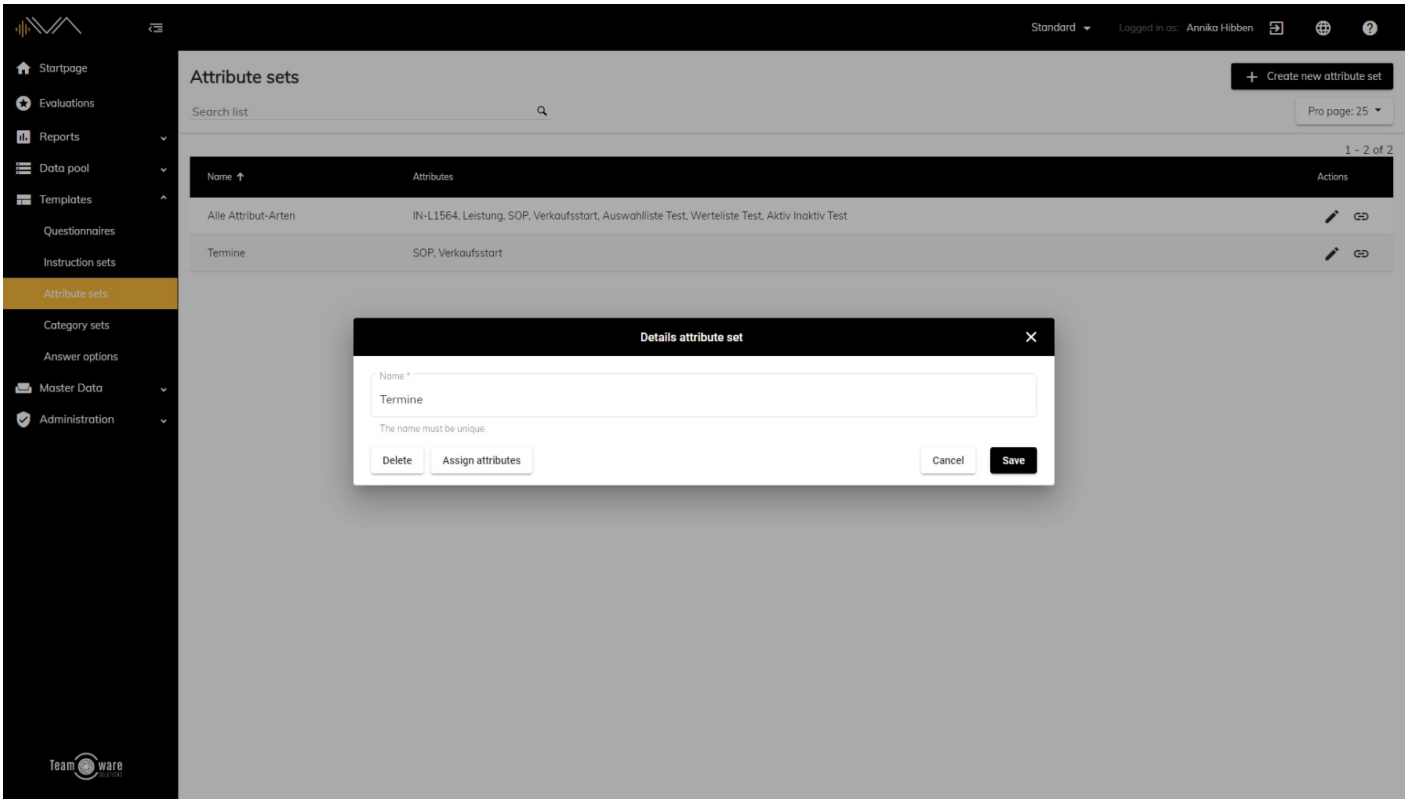

- How do I create a new attribute set?
- How do I edit an existing attribute set?

How do I create a new attribute set?

First navigate to Templates -> Attribute Sets in the left navigation bar. Now click on the "+ Create new attribute set" button at the top right. A new pop-up window will open where you can give the attribute set a name. Click on "Save". In the additional pop-up window that opens, you can add attributes stored in the data pool to the current attribute set (double-click or drag & drop). Alternatively, you can also create a new attribute using the corresponding button. When you have added all the desired attributes to the current attribute set, click on "Save".

How do I edit an existing attribute set?

To edit an existing attribute set, first navigate to Templates -> Attribute Sets in the left navigation. Now you can browse the list of your attribute sets. When you have found the right one, double click on the row or alternatively on the pencil icon. You will see a popup where you can edit the attribute set name or delete the attribute set. To change the attribute assignment, click on the "Assign Attributes" button. This will open a new popup. On the left side you will find all available attributes and on the right side the attributes assigned to the attribute set. You can assign new attributes to the attribute set via drag & drop or double-click. When you are done, don't forget to click on "Save".
